ABSTRACT

Informal sector economy continued to increase, although the world economy is experiencing a prolonged crisis. Phenomena that arise in the community, stating that the informal sector are always related with the family business in the use of space as well as the home page as a place of business. This is a norm since pre-industrial era to the present, especially in many developing countries. Giving rise to the transition function of space, and the bias function between the space for family activities with the need for such work, the allocation of space in the separation of household activities. Giving rise to the transition function of space, and the bias function between the space for family activities with the need for such work, the allocation of space in the separation of household activities with businesses, increased land use and disturbance to residents privacy, both individually and its association with socio-economic mobility of its inhabitants.

This research is a case study on transforming the use of residential space, a place for the business activities of stone sculpture which is equivalent to the tourist area Muntilan stone carving and clay sculpture producer in Kasongan village, Central Java. Home ownership, the morphology of space, type, number, size and activities of the activities in each compartment into variables in this study. The purpose of this study to assess changes in the fabric of space, which affected by business activities. This process resulted in the separation of business and household privacy, both physical and non-physical. This study focuses on qualitative research grounded theory approach, and uses purposive sampling. In addition to empirical data obtained from primary and secondary data is also obtained from the questionnaire. Then the data were analyzed with chi-square test for relationships between variables. Data collection techniques used through participant observation, sketch drawing room, photography and interviews to provide an overview of activities and patterns of settlement in the use of residential space as a means to support business activities.

The study focuses on the use of space in residential homes are used as a place for business activities. Transformation of the use of residential space, especially yard or front porch, resulting in a multifunctional space.
