ABSTRACT

Bung Karno cemetery area is a tourist area, where the presence of it led to the growth of commercial area around the cemetery. Commercial area growing as well as the development of the area around the Bung Karno cemetery certainly bring positive impacts to people's lives around it. Problems in this area is the gap function of Bung Karno cemetery as icons of Blitar, that has function as a tourist attraction and cemetery function as a part of Green Open Space. The facilities in this area should be linkage with the main attraction. The purpose of this study was to structuring Bung Karno cemetery area as a generator of ecotorism development Blitar city.

Theory used in this study is tourism, ecotourism, linkage, cemetery as part of a green open space. The method used is descriptive qualitative. To identify the specific characteristics for the development of tourism used Character Appraisal techniques. Criteria derived from tri-angulation technique that combines data analysis, study references and stake holder opinion. Criteria used to compile concept of regulation Bung Karno cemetery area.

The results of this study is to make the concept of structuring characteristics Bung Karno cemetery which has function as a tomb and its function as a tourist attraction. Factors that affect the regulation is building facades, pedestrian way and roads, land use. Regulation criteria of this research is creating visual and structural linkage in the study area as well as the arrangement of land uses based ecotourism. Regulation concept is to create a visual linkage of building facade, creating a pedestrian path way along the road that connects each fragment in the research area, the concept of land use arrangement that divides the study area into three zones: the core, intermediate and comercial. Development in this area is expected to be a generator of Blitar ecotourism development.

Keywords: Ecotourism, Bung Karno cemetery area, cemetery as part of green open space.
