ABSTRACT

In this final project, the researcher tries to create an information system to monitor and evaluate one’s project using Java Server Pages (JSP). Actually this program has existed before, this project has the purpose of creating a system that is almost the same as Microsoft Project mentioned in the form of Web. Monitoring covers the activity of observing / reviewing / learning and monitoring, that is done continuously or periodically by anyone who feels concerned about any program in all activity implementation level, to ensure the targeted activities goes according to the plan.

This final project tries to build such an application by using Java Server Pages, PHP and MySQL that are implemented in the form of an informative web. Through this final project, it is expected to be able to help give facilities to everybody.

Keywords: Monitoring, Microsoft Project, Java Server Pages.
