In today’s modern industrial control or controllers of a system is necessary for the smooth production process in an industry. In the development of control systems or controllers are not separated from the technology in the electrical field, when the electric motors began to replace other forms of energy sources such as humans, animals or other personnel. Machine maker of porridge paper (pulper) is the instrument that used to produce porridge paper or pulp by with of mixing process and census taking materials it’s paper and water that materials make use of frace papers. The process of making gruel paper (pulp) do for use the frace paper that can processed to be required rotation paper in the kind of readiness and skill in operational pulper machine. This project field explain about panel design of machine pulper. Start from panel assembling to components that used in the pulper panel.
