ABSTRACT

This application run by company called “Global Company” and the processes orders doing by customers. The application routes each order to two suppliers, Select Manufacturer and Rapid Service, to get the price. The application chooses the supplier that provided the lower price to fulfill the order. To doing order process, Global Company provides customers with a web application called the GlobalCompany-Client application. The GlobalCompany-Client application enables customers to browse products and place their orders. This web application is built using Application Development Framework (ADF) technology. The application consists of different projects, each of which performs a specific function.
