SUMMARY

Comprehensive KIP (Kampung Improvement Programme) has been implemented since 2000 in most kampung in Indonesian cities. In Surabaya, Comprehensive KIP has been implemented in more than 40 kampungs, and has benefit the community in many aspects. Since 8 years of the implementation (2000-2008), there has not been any assessment in how far the impact or the magnitude of the programme to the community, in physical, economical and social aspects, also in the purpose of combating poverty. Therefore this research is necessary in assessing to what extent the programme is successful or not.

Result of the research shows that in physical aspects, the community benefit Comprehensive KIP through the quality improvement of the environment, housing condition and settlement’s infrastructure, that are still in good condition. In economical aspect, Comprehensive KIP has successfully developed 57% of small and middle scale business or industry managed by the community. Yayasan Kampung (Kampung Foundation) and Diversified Business Cooperative (KSU) is highly influenced by role of the community in managing the grant and revolving fund, so that the program can be simultaneously applied.
