ABSTRACTION

Currently only a few people who understand and know about the world of military aviation in Indonesia. The average person who understood only the person who has an interest in this world. The lack of facilities or containers that gives information to the general audience is one of the causes of this situation occurs. This is what triggered me to bring a Military Aircraft Museum Indonesia.

Military Aircraft Museum Indonesia is an institution which, besides functioning as an educational and recreational facilities as well as a containers to nurture and show off all things related to airplanes, especially in military areas within the scope of Indonesia.

The approach used is the theme of the application characteristics of formations, where image building is expected to be in accordance with the characteristics of an educational facility that have attractive and dynamic. With the application of these themes. The building expected to can accommodate user behavior and modify the activity inside.
