Abstract

The process of the sale and purchase must be done with conventional sellers and buyers unite physically. The process of sale and purchase of the conventional can only meet in the sale and purchase of small scope. Along with the development time of the sale to buy votes is not so conventional complete sale and purchase, by the creation of a system of sale and purchase of modern and known by the name of e-commerce. With e-commerce sale and purchase process can be done without the sellers and buyers unite the physical, so that the space become much more knowledgeable.

E-commerce application is supported with a CMS (Content Management System) to facilitate Admin to manage e-commerce website without having to have the ability html. Konakart is one example open source CMS-based e-commerce programming languages java.

Results of this final task is the addition of several modules in Konakart. Module is added to the payment process using a mobile payment gateway and some business processes that occur in cooperative savings and loans.

Keywords: CMS, E-COMMERCE, KONAKART.
