ABSTRACT

In this era of globalization and information, the mastery of information is required. To meet this need for information technology human resources required to develop, not only in terms of absorb / access information, but how to manage, process, to convey that information. In developing its resources, human beings need the container / place to hone their skill, and that's what we chose underlying **School of Information Technology** as the title of the draft final project, an educational building that aims to prepare human resources in order to compete in the era of globalization, especially in the field of technology information.

Aspect of theme in the architecture plays an important role for the foundation of all processed work and the intellectual or artistic action (action architecture). And in this building is expected to deliver on all aspects of **Technology Integration** design.
