Abstract

Dengue fever outbreak has spread to all provinces in Indonesia. Each year the number of cases and victim human deaths have increased. This is based on data from the Department of Health Information Center, the total number of DBD cases in Indonesia in 2007 reached 140,000 cases with 1,380 deaths.

Thus the Health Department held a program of socialization of elementary school children to give them as early as possible knowledge about dengue fever prevention because children are the next generation and children are susceptible to this disease. Dengue fever most attack children.

The realization of this form of research and design comics as a medium of primary socialization and other support media is fascinating. And designing a strategy for dissemination event roadshow in elementary school in district and keeping in Surabaya, which can provide feedback in the form of increased knowledge about dengue fever prevention.
