Nowadays, the development of communication technology is increasingly becoming popular currently allows a person to seek as much as possible reference or discourse in accordance with their respective needs. One can easily find the latest news, latest journals as well as any required information through web media in digital form. Libraries grow along with the rapid advancement of information available so that conventional libraries began to develop into the digital library. In the process, not all libraries can be directly transformed into digital libraries. Hybrid Library may be one option for the library to be able to continue managing the library that has a collection of both digital and print media such as books, print journals, newspapers, etc. Based on the proliferation of mobile technology in society and the phenomenon of the above, then implemented an application that uses gammu sms gateway and php web service that integrates with the hybrid library aims to provide more flexibility in speed and accuracy of information on hybrid library services to the public. Thus, the user of public library can feel the ease and convenience to take advantage of the existing literature so that later can increase the reading interest of society and further supports the progressive development of science.
