Singapore Autism School is a work dedicated to children with autism, with main activities such as learning and teaching at the age of two to 12 years and there are also other activities that support, such as consultation, training for parents to educate children with autism at home, reading room. So that activities and facilities on the object pendidikkan intended as a place for children with autism and other support facilities for families and teachers to get information about autism.

Insight architectural theme of the behavior used as an approach to the design object, because the main problems children with autism is a cognitive ability that has direct influence on behavior. Design theme used is the interaction. This theme is directing the design concepts facilitate, guide, to direct the behavior of autism so that children with autism who are in the education are not left with any other normal child in the academic field. And during their educational process in this school, children will learn also how to communicate and interact with peers, teachers, therapists, and families so that they too will have a better attitude, more normal, and can be understood and accepted by society.
