ABSTRACT

Center for education of children with autism is a work of engineering that is central to healing and treatment for children who have difficulty interacting and communicating due to many factors with educational methods. In addition children with autism education center is also a means for parents to obtain information about autism and apply it to children with autism.

The theme of this design is Communication. As is known, children with autism can not communicate properly, or communicate or express her wishes. Causing difficulties between children with autism and other people and its environment in terms of communication, this can lead to problems between the two sides. Taking this theme is also adapted to the things that happen or occur in autism education.

Concepts that will be shown on this design refers to the communication theme is to present an atmosphere that can create a communication between users, building and the environment.

Keywords: Autism, Communication
