Abstract

Most of junior high school using the same method in learning History, this method called lecturing. Survey proved that students feel bored by this method because of one way communication its used. Besides the methods, there’s also a problem in the media they used for learning. They only used book, and the students feel that the book is not attractive and hard to understand. Therefore, a new media is needed in order to supporting students education.

Interactive media is one of the most effective media to deliver messages and information. That’s because of its ability to include audio, video, and interactivity so student will be easy to understanding the subject.

So, I create an interactive learning media for history subject using attractive learning concept. This concept will utilize every feature of interactive media to evoke students antusiasm and their interest in the history subject using audio, video, and illustration.
