ABSTRACT
Mostly, museums in Indonesia are just a place for putting the museum collections, less attention toward the exterior design of buildings and quality of space that supports the activities of the museum itself. Because of it, people less interest in visiting museums. Existence of museum is very important to provide information and knowledge about the culture and history of Indonesia, especially, existence of maritime museum was considered very important because Indonesia was a maritime country that has many cultures and great histories. Lamongan town is chosen as object location because this town had a great tourism potential and is supported by the presence of other well-known attraction. The design objection is to create a better museum than ever, not only focused on exterior design but also interior so people can be attracted to visit and get experiences in museum, so people will understand and know about the contexts presented.
