Abstract

Analysis of the potential for natural resources in the Coastal Lombang Sumenep recreational beach use evaluation index is compiled using descriptions beach index (BI), Knowledge Index (KI) and the Monetary indicators Index (MI). Based on the evaluation of the third index, the index of the most influential on the development of coastal natural resource Lombang Sumenep the availability of infrastructure and infrastructure (public services), namely through the beach index. Through the recreational beach index, we can learn from any sector of the beach to be used as a comparison that can be evaluated to further improve infrastructure and coastal infrastructure. From the calculation results and the survey found that the most influential factor for the evaluation index is Lombang tourist beach beach category index and monetary index. From the results of the evaluation, the sector - a sector that needs to be developed are the medium or media in terms of promotion that are at the location of tourist beaches.
