Railway transportation is one of a very important public transportations in a city or country. Railroad is capable to accommodate passengers effectively in large amount. Therefore railway station as the train stop must be designed well. If the railway station was designed well people would be comfortable using train transportation. Then the transportation problems in the city can be reduced.

Pasar Turi Railway Station, has an important role as a major line North railway transportation in java. On the other hand surabaya population increase every time. So it is very important to have the good design to cover the needs of new future people population in Surabaya.
