Abstract

Implementation of e-Government in West Nusa Tenggara Province is planned to be felt not only by the community but the surrounding businesses. Going forward the company is expected to make use of e-government to meet its business needs. NTB governments that have implemented e-government do not know how far the influence of e-government to the company. It is necessary to do the analysis of e-government influence on the company.

Her analysis is done by using the structural model on paper Business perceptions and satisfaction with e-government: Findings from a Canadian Survey (Christoper G. Jeffrey Reddick and Roy 2012). In the model there are three latent variables, namely Satisfaction With e-Government Website, Regulatory Changes, and Perception of Government. Three latent variable measured by the indicators - indicators, there are three indicator variables measuring each of his. The structural models were analyzed by using SEM (Structural Equation Model).
Full Model in SEM analysis using the model turns out not fit because it has not met the criteria so goodness of Fit models were modified. After the modification of the model, the model has become fit and all its variables have a significant effect.
