ABSTRACT

Interior Redesign of Al Madani as Semi-Nature Based Playgroup and Kindergarten in Sidoarjo with Natural Ambience

Early childhood education is an effort aimed at building a child from birth up to the age of six are done through the provision of educational stimulus to support growth and development physically and mentally so that children have a readiness in entering further education. Education for children at that age will be preferred learn through play and encourage children to be active, move, learn, ask questions and interact. Form of early childhood education, such as play groups / playgroup and nursery school has a range of alternative ways of learning so that children do not feel tired of studying and also help kids to easily interact with or adapt to the environment or the environment.

Learning method by means clustered around the Sentra or referred to, is a teaching method that is widely used to make every playgroup and kindergarten using an imaging method requires in order to survive while the playgroup and kindergarten is not a lot of time thinking about the delivery of the school's image.

Utilization the natural environment can be used as a way to convey the child's learning orientation is one way of learning so that children can easily adapt to and interact with. The use of natural elements in the school meant that children could identify environmental or neighborhood and help learning how to help children to learn through the environment or environmental benefits that easily interact and adapt well into the image of the school as the school's delivery of semi-natural to the wider community.
