ABSTRACT

Javanese language is the mother tongue of Javanese ethnic and as one of the dominant communication media that used by Javanese people. As we know, Javanese language is not only functioning as communication media like the other languages that are all around us but also contain sublime philosophical values inside. This Javanese Language and alphabet learning contains much meanings that worthwhile in forming the character of children in the future, such as Unggah ungguh Basa, Javanese Alphabet, to Pewayangan. But the fact nowadays, Javanese language local content subjects is one of the subjects that are not favored by students. Because in addition to elusive, its also considered less interesting and boring.

This research has designing of the learning tools of Javanese language that are beneficial to 5th grade of elementary school students, change the perception about Javanese language lessons is boring, as well as making the process of learning Javanese language at home became more fun for students as the goals. One of the method is by using interactive multimedia which is the interesting media for children. Interactive Multimedia as a media that capable of combining text, images, audio, music, animation or video in a unity mutual support that can make the learning process into a dynamic, interactive and good for individual learning. With the achievement of these goals, its expected to be useful for children as the next generation in understanding the value of Javanese ethics and culture in daily life.
