Abstract

Zakat is one of the pillars of Islam where Muslims who are qualified must be set aside some of their properties for people who are eligible to receive zakat. Someone must spend their zakat when his wealth exceed nisab. Nisab is the minimum limit of properties someone must own, in order to spend their zakat. Zakat must be distributed in a reliable zakat management places.

There are some kind of properties which have different nisab. This application provides you to calculate the nisab based on their kind, then calculate the amount of properties which should be zakated. Beside, the properties value can be saved in this application, so it can be calculated after being saved for a year. This application also give the information of the nearest zakat management places for you.

This application built to help people managing their zakat, including understanding the value of their wealth that must be paid for zakat, knowing zakat management places, remember zakat payment day, as well as data storage assets in the future to do the calculation. Applications built in a mobile communication device to make it more practical and can be used at any time.
