ABSTRACT

Training facility is an important thing for a community, especially in the world of martial arts. The lack of facilities makes no harmonic relationship between martial arts communities and reduces public appreciation of the martial arts tournament event. Therefore, it is needed to be a design which is able to accommodate the activities of the martial arts community, so that people who love martial arts can hold events and matches within the city of Surabaya. This design has a purpose to serve as the facility where martial arts communities can gather, interact, and conduct martial arts activities in Surabaya.

“Reflex” which is used as a theme in designing means that all aspects of the design will be relevant and can be applied into a design which is environmental friendly, looked dynamic, and strong. The result of this design will show the spirit and identity of the building as a martial arts center and bring users to experience the feelings that will arise suddenly while in the building area.
