ABSTRACT

Performance and achievement of Student Activity Unit (UKM) in ITS Campus often have ups and downs, which are caused by poor regeneration processes and facilities that are less supportive. ITS Campus Student Center is building an object that serves as a gathering place at the same time facilitate the activities of co-curricular student especially in ITS Campus. The Student Center is a semi-public buildings where the majority of users of this object is a subject that will interest and have the license for the existing regulations. Based on the approach presented character of philosophy ITS logo with the purpose of this object, then the “Wijaya Kusuma” is choosen as object design theme of this Student Center. The process of planning and designing this Student Center requires a comprehensive consideration, because it has a plurality of objects in space requirement, where each field of the Student Activity Unit (UKM) in ITS requires focuses and different concentrations. Therefore, the order of these needs can be accommodated to the fullest, one of the key is the arrangement of space. Art of arranging space will also affect the aspects related to the spatial, for example, is a system of structures, utilities, and even comfort.
Objectives to be achieved from this design process is to obtain an idea of the design object that is able to accommodate and be a place that can develop the potential of students, especially in terms of interest in talent, so the character and academic kualitas ITS increasingly formed and stronger.
