ABSTRACT

Health is a state of well being of body, soul, and social, where health itself is an important factor in life due to a healthy body each individual is able to carry out all the activities of life with the good. Process human healing is the balance of a person's physiological and psychological conditions. To support the psychological condition of the environment it is necessary to nourish and comfortable, which gives a positive aura to one's healing process. Hospital is one place where the treatment took place, and provide perlindungan against patient safety. Hospital facilities were used as a consultation, investigation, examination and treatment of patients is Outpatient Installation. Design the interior can be one solution to maximize the functionality of Outpatient Installation of the hospital. By improving the environment existence direct contact with patients in order to give a good effect in the process healing, care and improving the quality of the hospital.

General Hospital dr. M. Soewandhie Surabaya is a type B hospital means that the hospital is a hospital which serve as a referral hospital city level. With a capacity of referral hospitals, hospital dr. Soewandhie provide major role for health care for many patients. The increasing number of patients every day in the hospital dr Soewandhie make the hospital more fully and tightness. This phenomenon occurs because of the lack of land for waiting rooms and service which makes the patient must be confused to where when you've finished the registration. Environment healing or often called a "healing environment" may be one solution to maximize the functionality of Installation Outpatient. So hospital can give a good effect in improving the quality of service and home the pain.
