ABSTRACT

Supports were very important for cancer patient, so that his/her disease does not going worst. Support will be better if only it were accompanied by accurate and well treatment. By this term, so we needs design that accomodate and support the well-treatment process in healthcare facilities. This design project purpose to increase cancer patient’s life-quality besides as city medical support facilities. Theme “senses” which is used in this design have meaning as ‘indera’. Where as designer hoped that senses reaction to the stimulation in object design will be increasing cancer patient’s life-quality. Product of this design project is architecture that stimulate the senses with correlation between nature and architecture to make positive reaction of senses through the objectivity of senses reaction to nature.
