Final Project Title : Redesign Kampung Rambutan Terminal
Advisor : DR. Eng. Ir. Sri Nastiti, MT
Period : 2013-2014

The increased number of vehicle on the Jakarta City's highway are not in accordance with its capacities, the result is Jakarta known as the most crowded city in the country. The highest number of public transportation in Indonesia located in its capital city, but unfortunately the citizen prefer to use their private vehicle, either motorcycle or car as their daily transportation with comfortable and safety as the reason.

In response, the government had planned to revitalize the entire Jakarta's public transportation to become newer, more clean and comfortable. But also improve the conditions of the public transport must be accompanied by improving the condition of the terminal which is a public transport hub.

Kampung Rambutan terminal as one of the major terminals in Jakarta has been famous for its irregularity and rundown. According to the plan of the city government, the terminal will be redesigned for comfort along with a new concept. Hopefully, this project will provide an overview of the government.
