ABSTRACT

Card Warlock Saga is a social game application that also contains elements of RPG, turn-based games and card games, so this game’s genre could be called turn-based collectible cards that are themed turn-based which use card as a battle mechanism. Players have a hero to control and set of cards as the fight mechanism.

Because of this game is a social game then this game is made so the player can interact with other player, so this game implements some features that support interaction between players like add friends, trading items and send message. And this game will be integrated with social networking site Facebook.

The integration between this game application and social networking site Facebook will developed with Facebook SDK for Unity Tools which use Facebook API service. The integration with Facebook is expected to facilitate the interaction between players.
