Abstract

The activity of Mall Olympic Garden may cause some trip generation, when trip generation is not restrained it will cause a negative impact on traffic on Kawi street and Tenes street.

The analysis method is trip generation analysis, level of service analysis, trip generation based on activity in the commercial area that hasn’t been operating according to the plan analysis and arranging type of activity on commercial areas that hasn’t been operated at Mall Olympic Garden.

From the results of the analysis is at commercial area that hasn’t been operated is need to change the type of activities that have a large vehicle movements to be the type of activities that have a low vehicle. So the degree of saturation (DS) Kawi street and Tenes street is on the ideal level.

Key words: Mall Olympic Garden, trip generation, road system
